Subject: Notice of Winbond Lead (Pb)-Free Conversion Plan

To Our Valued Customers:

Thank you for selecting Winbond's logic and memory products. The purpose of this notice is to inform you of our Lead (Pb)-Free conversion plan. Your kind comments and approval will be deeply appreciated.

Winbond, as a leading supplier of high quality semiconductor components, is committed to environmental protection and compliance with international regulations. The RoHS Directive (Restriction on Hazardous Substances 2002/95/EC) of European Parliament will restrict the usage of lead and other hazardous substances in electronic components after July 1, 2006. We anticipate most of our customers will respond to RoHS requirement and convert to lead (Pb) – free products before June 30, 2006.

Winbond has been preparing for this conversion over the last year, with a target completion date of 12/31/2005. At this time, Winbond products will be available in both leaded and lead-free versions. Winbond has chosen Matte Tin as the lead finish material for our lead-frame based products in the lead-free conversion. Our Matte Tin based lead-free products are backward compatible with standard (leaded) component reflow assembly processes. In order to facilitate the lead-free conversion, Winbond is encouraging all customers to convert to lead-free for all product use. It is our goal to convert all products shipped by Winbond to 100% lead-free by June 2006. For your convenience, a copy of our ROHS compliance notice is attached to this letter.

If you have any questions with regards to our Lead (Pb)-Free conversion plan, please feel free to contact our Sales representatives.

Sincerely yours,

Peter Himes
Vice President, Sales and Customer Service

September 20, 2005

To our valued customers,

Winbond Electronics Corp. warrants that all our Pb-free products comply with RoHS regulations of EU Directive 2002/95/EC. They will not contain the restricted substances above the threshold limits as specified in the attached list.

Chemical Substance	ppm
Cadmium	< 100
Lead	< 1000
Mercury	< 1000
Hexavalent chromium	< 1000
Polybrominated diphenyl ether (PBDE)	< 1000
Polybrominated biphenyl (PBB)	< 1000

Very truly yours,

Peter Himes
Vice President, Sales
